

Flowchart

Examples:

1. Calculate the Area of a Rectangle

- Input: Length and width of a rectangle.
 - Process: Multiply length by width.
 - Output: Display the area.
-

2. Check if a Number is Even or Odd

- Input: A single integer.
 - Process: Use a condition to check if the number is divisible by 2.
 - Output: Display whether the number is even or odd.
-

3. Find the Largest of Two Numbers

- Input: Two numbers.
 - Process: Compare the two numbers.
 - Output: Display the larger number.
-

4. Simple Grading System

- Input: A student's marks.
 - Process:
 - If marks ≥ 75 , grade = "A".
 - If $50 \leq \text{marks} < 75$, grade = "B".
 - If marks < 50 , grade = "Fail".
 - Output: Display the grade.
-

5. Calculate the Factorial of a Number

- Input: A positive integer n.
 - Process: Multiply numbers from 1 to n iteratively.
 - Output: Display the factorial of n.
-

6. ATM Withdrawal Process

- Input: Account balance and withdrawal amount.
 - Process:
 - Check if the withdrawal amount is less than or equal to the account balance.
 - If yes, deduct the amount and display the new balance.
 - If no, display an error message.
 - Output: Display the result.
-

7. Print Numbers from 1 to 10

- Input: None.
 - Process: Use a loop to iterate from 1 to 10.
 - Output: Display numbers from 1 to 10.
-

8. Convert Temperature from Celsius to Fahrenheit

- Input: Temperature in Celsius.
 - Process: Use the formula $F = c \times \frac{9}{5} + 32$.
 - Output: Display the temperature in Fahrenheit.
-

9. Basic Login System

- Input: Username and password.
 - Process:
 - Check if the entered username and password match the stored values.
 - If yes, grant access.
 - If no, display an error message.
 - Output: Display the result.
-

10. Sum of First n Natural Numbers

- Input: A positive integer n .
- Process: Calculate the sum using $\text{Sum} = \frac{n(n+1)}{2}$.
- Output: Display the sum.
